CRM Acceptance Report and Dashboard Requirement

Test of reserviafrontend.vercel.app · 3 November 2026 · For the web developer · From the Managing Director

1. Summary

The core of the CRM works: leads come in from the website form, duplicates merge, and the server enforces stage rules. What is missing is everything that lets the team manage and measure the business: a dashboard, quotations, payments, forecast, CSV import, file upload, and source tracking. Against the plan, phase 1 is about half done.

Area	Status	Note
Pipeline board and lead list	Pass	8 stages, counts and EGP totals, search, filters, WhatsApp and Call buttons
Lead record, stage history, timeline	Pass	Every move logged with time and user
One lead per phone	Pass	01285590535 matched +201285590535 and logged a repeat enquiry
Website form to CRM	Pass	Reference RSV-0311-0005 shown to the visitor; lead arrived within seconds
Stage rule: Won only from a proposal	Pass	Server refused New to Won
First reply clock	Pass	Shown on each lead, turns red when overdue; working hours respected
Dashboard and reports	Missing	Section 4
Source and UTM capture, WhatsApp Ref code	Missing	Website leads show source "Website" only
Quotations, payments, forecast	Missing	Phase 2 (December)
CSV import, file upload	Missing	Phase 1, finish by Tue 17 Nov
Amplitude sync from the CRM	Not visible	No screen to check; verify in Amplitude once events flow

2. What was tested

Test	Action	Result
Duplicate phone	New Lead with 01285590535 (existing +201285590535), channel Phone	No new lead; note "Repeat enquiry via phone" added to RSV-2910-0001
Invalid stage jump	New lead RSV-0311-0004, move to Won with value 1,000	Refused: "Only a lead with a proposal can be marked won."

WEBSITE
www.reservia-energy.com

Test	Action	Result
Website intake	Contact form on www.reservia-energy.com, phone 01000000088	RSV-0311-0005 created: channel web_form, source Website, segment villa, no owner

Not tested: WhatsApp webhook, Amplitude delivery, mobile layout, other users and roles, the 8 working hours rule across a weekend, MD approval above EGP 1M, and back one stage at a time.

3. Defects and gaps to fix

#	Finding	Fix	Finish by
1	Website leads carry no UTM or campaign data, and the WhatsApp links on the site carry no Ref code. The crm-bridge.ts file is not installed.	Install website/amplitude.ts and crm-bridge.ts (brief, workstream B). Store first-touch UTM for 30 days; add the Ref code to every wa.me link.	Tue 10 Nov
2	Website leads arrive with no owner, so nobody is told to reply within 8 working hours. Lead RSV-3010-0002 has been unassigned for 3 days.	Assign new web leads to the Sales Engineer automatically, or round-robin. Notify the owner.	Tue 10 Nov
3	The stage dropdown lists every stage, including Won and Lost from New.	Show only the allowed next stages. Keep the server check.	Tue 10 Nov
4	Source, Governorate and Segment accept free text ("google ads", "alexandria", "unknown").	Use fixed lists: seven segments, a source list (Google Ads, Meta Ads, Organic, Referral, WhatsApp direct, Other), the 27 governorates.	Tue 10 Nov
5	The official logo is missing: the login page shows an empty box and the header shows text only.	Use the official battery "i" logo from the brand pack.	Tue 10 Nov
6	The open pipeline total shows 1,500 EGP and ignores stage weights.	Add the weighted value (spec weights 5, 10, 25, 40, 55, 75 percent).	Tue 17 Nov
7	Test records remain: RSV-0311-0004, RSV-0311-0005 and a repeat-enquiry note on RSV-2910-0001.	Delete them. Add a delete or archive action for the MD only.	Tue 10 Nov
8	CSV import and file upload are not in the menu.	Build per spec section 7 using the import template.	Tue 17 Nov

4. Dashboard requirement

The CRM has no dashboard today; the menu shows Pipeline and Leads only. Add a Dashboard as the first menu item and the screen users land on after login. One screen, no scrolling on a laptop, filter by month and owner.

Block	What it shows	Source
Targets to 28 Jan	Enquiries 102, qualified 26, surveys 14, proposals 9, signed 3 (1 villa, 2 farms): actual against target, with a bar for each	Targets table; counts from stage history
Pipeline by stage	Count, EGP value and weighted value for each open stage; total weighted pipeline	Leads, stage weights

Block	What it shows	Source
Speed	Leads past the 8 hour first reply limit; leads with no follow-up date; average hours to first reply	First reply due, activities
Source quality	Leads, qualified and signed by source, and cost per qualified lead against the EGP 3,500 limit (spend entered monthly)	Source field, monthly spend
Won and lost	Win rate by segment, median days to close, lost reasons ranked	Stage history
This week	New leads, moves, and the 5 oldest unanswered leads, each a click to the lead	Activities

- Back it with the two endpoints already in the reference build: /api/reports/weekly and /api/reports/forecast. The logic and tests are in src/lib/report.ts and src/lib/forecast.ts.
- Role view: the MD sees all owners; a sales user sees their own leads and the team totals.
- Use the brand colours (green 004F2F, teal 00656A, amber EDA202) and the official logo. The clickable sample shows the layout to aim for.
- Acceptance: with the three test leads removed and ten seeded leads loaded, every figure on the dashboard matches a manual count from the Leads list.

5. Sales cycle and conversion KPIs

These sit on a second dashboard tab called Performance, with the same month, owner and segment filters. Every figure comes from the stage history the CRM already records, so no new data entry is needed except the lost reason and the monthly ad spend.

A. Speed: how long each step takes

KPI	Definition	Shown as
Days in each stage	Average and median days a lead spends in each stage before moving on: New, Contacted, Qualified, Site survey, Proposal sent, Negotiation	Bar per stage, split by segment
Hours to first reply	Created to first human reply, in working hours	Average, median, and % within 8 hours
Days to quote	Created to first quotation or proposal sent. Until the quotation module is live, use the move to Proposal sent	Average and median, by segment and owner
Days to close	Created to Won, for won deals	Average and median, by segment
Stuck leads	Open leads whose time in the current stage is more than twice that stage's median	List with owner and days; red on the board card

B. Conversion: how many make it through

KPI	Definition	Shown as
Stage conversion	Share of leads that reach the next stage, for each step of the funnel	Funnel with % between stages

Email | Business_info@reservia-energy.com

WEBSITE
www.reservia-energy.com

KPI	Definition	Shown as
Win rate	Won divided by (Won plus Lost), closed deals only	By segment, by source, by owner
Loss rate and reasons	Lost divided by (Won plus Lost), with the reason and the stage where the deal was lost	Ranked list by segment; stage-lost chart
Quote to win	Quotations accepted divided by quotations sent (after phase 2)	Percentage, by segment
Lead to signed	Signed deals divided by all enquiries in the period	Percentage against the 3 of 102 plan

C. Value and cost

KPI	Definition	Shown as
Average deal size	Contract value of won deals	By segment
Average discount	Quotation discount percent on sent quotations (after phase 2)	By owner and segment
Pipeline coverage	Weighted open pipeline divided by the target still to sign	Number; below 1 turns red
Cost per qualified lead and per signed deal	Monthly ad and SEO spend divided by qualified leads, and by signed deals	By source, against the EGP 3,500 limit

- Segments are the seven in the spec: villa, compound, farm, oil and gas, factory, services, other. Show every segment even when it has no deals yet, with a dash instead of zero where a rate cannot be calculated.
- Small numbers: below 10 closed deals in a group, show the count next to every rate so a 100% win rate on 1 deal is not misread.
- Endpoint: add /api/reports/performance returning all figures above, with tests in the same style as src/lib/forecast.ts. Finish by Tue 17 Nov, due Thu 19 Nov, with the first dashboard.
- Acceptance: seed 12 leads with known dates; every average, median and rate on screen matches a hand calculation.

6. Revised dates

Item	Finish by	Due
Findings 1 to 5 and 7 (tracking, owner assignment, lists, logo, cleanup)	Tue 10 Nov	Thu 12 Nov
Dashboard and Performance tab, weighted pipeline, CSV import, file upload	Tue 17 Nov	Thu 19 Nov
WhatsApp live, Amplitude sync checked, acceptance tests 1 to 8 with Ahmed	Tue 24 Nov	Thu 26 Nov (go-live)

Please reply by Thursday 5 November with a yes or a date for each item. Where this report and the Build Spec v3 differ, the spec wins.
